Emergency Management Assistance Compact (EMAC) resources in California

The Emergency Management Assistance Compact (EMAC) is the Nation's mutual-aid system that provides a formal structure where all 50 States and 4 Territories have the ability to share resources across State boundaries. The Cal OES EMAC Coordinator in coordination with Cal OES Fire Branch are working together to request and coordinate needed resources via the EMAC Compact.

- The following states have EMAC resources in California:
 - Idaho: 5 engines
 - Montana: 5 engines
 - New Mexico: 5 engines
 - Washington: 15 engines
 - Utah: 10 engines
 - Texas: 25 engines

Cal OES INLAND REGION

Water Supply Service Disruption, City of Stratford, Kings County

On 08/12/18 at 1600 hours, the California State Warning Center (CSWC) was notified by the Cal OES Inland Duty Officer that the wells servicing the community water system in Stratford, Kings County, have failed and that the community has been without water since the morning of 08/12/18.

- Cause of failure was a disruption in power and a hole in the casing.
 - Environmental Health, the Medical Health Operational Area Coordinator, Fire, and OEM have all been notified.
 - Environmental Health continues to work with the State Water Board for addressing public health concerns.
 - Service has been restored on an old well, well #6 which has restored water service for sanitation purposes to the community, but a Do Not Drink Order remains in place.
 - Temporary well is online for sanitation purposes only.
 - Stratford Public Utility District (SPUD) continues to assess and fix issues on main wells #5 and #7, and obtain quotes for the repairs and emergency funding to restore service to the community.

WEATHER OF CONCERN

NORTHERN CALIFORNIA

- Hot temperatures across the entire San Joaquin Valley and desert areas, as well as many foothill locations this weekend. The combination of hot day time temperatures and warm night-time temperatures could combine to create a dangerous condition in which heat illnesses are possible.
- Air Quality Alerts have been issued for portions of Northern California until wildfires are extinguished.

SOUTHERN CALIFORNIA

- A Flash Flood Watch has been issued today from 1200-2000 hours for the mountains, especially near burn scars from the recent fires in San Bernardino, Riverside, and San Diego counties.
- Air Quality Alerts have been issued for portions of Southern California until wildfires are extinguished.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

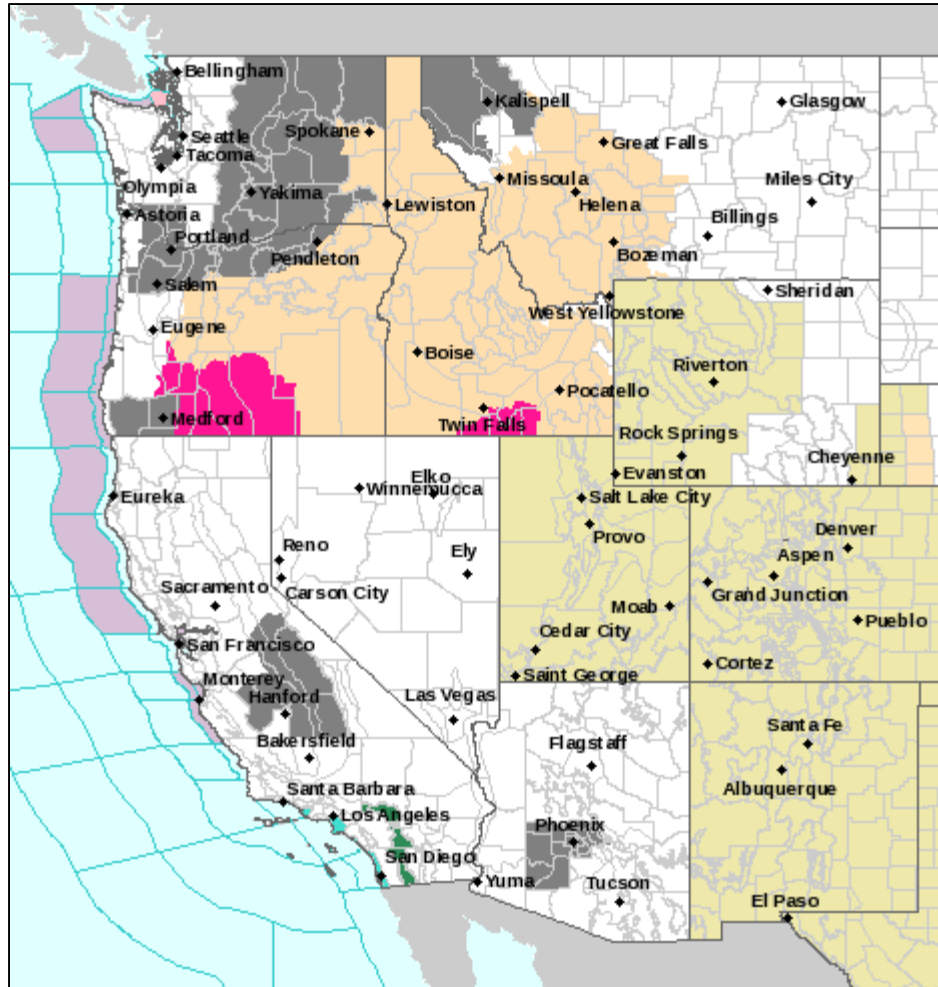

Slight chance of Dry Thunderstorms near OR border through tonight. The weather pattern will be similar the next couple of days with Northern California caught between a Four Corners High and an offshore trough. Moisture has flowed northward and will remain the catalyst for the thunderstorms. The low will gradually sweep over the area tonight into Friday and scour out the moisture and end thunderstorm chances. During the near term, isolated to widely separated thunderstorms will affect northern and eastern portions, especially favoring Modoc and Lassen counties. Thunderstorms will largely be on the dry side. Humidity will be a bit higher today although teen readings will remain across the lower elevations. Wind speeds will start to increase the next couple of days due to the approach of the offshore trough. S-SW-W gusts between 20-25 mph can be expected across the Delta Region, Shasta Valley and areas along and east of the Cascade and Sierra crest. Friday appears to be the transition day as the trough moves east and allows a broad N-NW-NE flow over the northern third of the area. Portions of Del Norte and Siskiyou counties will experience gusts to 25 mph with a drier airmass. Other portions of the region should observe W-SW winds with peak readings up to 25 mph. Thunderstorm chances should be low on this day although it depends on the timing of the trough passage so will be monitoring. The high is expected to briefly form over CA during the weekend although the weather models are coming more in alignment with providing another weak trough intrusion Sunday/Monday. The high should build back over the area next week. Temperatures would ultimately warm and humidity values would lower. The trough presence could increase winds for the area but the airmass appears to be dry so thunderstorms are not expected at this time.

SOUTHERN CALIFORNIA

Scattered wet thunderstorms possible today. Drier and warmer this weekend. Southeasterly flow will continue to direct monsoonal moisture into the area the next couple of days, resulting in scattered wet thunderstorms. Most of the storms will occur again over the Sierras as well as desert adjacent sides of the Cleveland and San Bernardino National Forest. The best chance of thunderstorms during the outlook period will likely occur today due to more moisture availability. Storms this afternoon may extend into the Angeles National Forest and much of the desert. One or two storms may wander into the foothills this evening before all storms dissipate by sunset. Afterward, high pressure is expected to build overhead Friday into the weekend which will bring an end to any chances for thunderstorms. Expect temperatures to be in the 80s in the mountains to the upper 90s in the valleys today, but by the weekend, most of the valleys will be in the 100-105 degree range. Minimum relative humidity will be lower over the weekend with widespread minimums in the teens. Afternoon breezes of 20-30 mph will be possible in and near the desert passes the next two days, but light winds are expected over the weekend. Sunny skies and very warm temperatures will continue into the first half of next week.
